

# Final Project

Yao Xiao

# Original Creature

# Initial Randomization → Population

Randomize main body shape, size

Randomize legs shape, size

Fitness Function:

Efficiency of the movement:

$\text{Absolute Dist}(\text{start to end}) / \text{Total Dist Moved}$

# Mutation Functions

- MutateWeightMass: Add a weightmass of random mass deviated from the center of the main body
- MutateExtendShank: Extend two shank parts on the same side with random coefficient
- MutateMass: Modify the mass of the mainbody evenly to a random value
- MutateTail: Add a tail with random mass and random angle range of the hinge to the mainbody

# Evolution

Randomly generate 10 creatures

Select the one with the highest fitness score

Make 10 copies of the best creature

5 rounds of evolution:

1~2: Evolve randomly with two of the mutations

3~5: Evolve randomly with all kinds of mutations

Select the best creature each round for the next population for evolution

# Fitness Score

round 0: 0.4154390595889895

round 1: 0.5730088065771464

round 2: 0.5789245242045443

round 3: 0.5703737766339946

round 4: 0.5545109347093014

round 5: 0.4856392919971018
